DIESEL TUNING**

We offer engine remapping, the modern version of chipping which is the correct way to safely tune a modern diesel engine and is not a so called "tuning box". With our ECU remapping you get smooth and progressive power, with improved response, that can be tailored to your requirements. Angel Tuning are able to offer tuning services either at one of our outlets or at your location with our mobile tech team, who are fully equipped with the latest diagnostic equipment as well as a wide range of tuning hardware. Whilst we normally book 3-5 days in advance for mobile and 1-2 days for our outlets it depends when you book in as we can often get customers in earlier. Engine tuning is available from just £250 for our mobile service and from £225 at our outlets.

3.0 CDI "231" +40bhp / 60lb ft

INDUCTION KITS & AIR FILTERS

Angel Tuning can also provide the excellent BMC Carbon Dynamic Induction kit. Whilst the CDA increases the power on its own (+4-6%), it also allows us to increase the power of the initial mapping due to the improved air flow rate. CDA's can be sent out in the post from £164.50 including P&P or we offer a free fitting service when done in conjunction with engine tuning.

As an alternative to the CDA, Angel Tuning can also supply a BMC sports air filter, which uses the same washable filter element technology as the CDA'S. This will increase the power by a further 1 – 1.5% due to the improved air flow rate and further improve the throttle response. Prices are from £32.50 including P&P or free fitting with engine tuning.

SUSPENSION

In addition to the engine work, we can supply and fit Eibach lowering springs over your standard dampers at one of our locations. Our price for supply and fit of the springs starts at just £305, which includes VAT. The only thing this doesn't include is alignment, which we suggest you have done 100-150 miles after the work to allow it to bed in.

EXHAUST SYSTEMS

We are also able to offer a custom made stainless exhaust system via our partners, Longlife. The exhaust centre will work with us to provide a Sports Cat system where possible to work with the mapping where possible and produce an additional 6 -10% power. This system will be built from 304 grade stainless steel includes the tailpiece design of your choice and the tone level you require. Prices start from £649.50 for a sports cat system and £349.50 for a cat back system.

BRAKING SYSTEMS

Should you also be looking to improve the stopping ability of your vehicle we can offer a package of EBC Greenstuff pads with their Turbo Groove Discs from just £195 for the front and £135 for the rear. This price includes VAT and P&P. Alternatively we can supply and fit at one of our centres.
